Subject: REAR DOOR LOCK STRIKERS - TAXICABS (2130)

Taxicab rear door lock striker assemblies have been reinforced to withstand the continual usage received in taxicab service.

These reinforced assemblies are now being used in production on taxicabs only. In these assemblies, the latch housing is tack-welded to the housing plate at the top to reinforce against breakage at this point.

The reinforced striker assemblies are available for Service and should be installed in taxicabs when rear door striker replacement is necessary. Reinforced assemblies may be ordered under the following part numbers:

392774 Rear Door Lock Striker - Right

392775 Rear Door Lock Striker - Left

Very truly yours,

Theo. P. Thomas
