PREPARING CAR FOR DELIVERY

The factory exercises extraordinary care to insure the proper operation of all instruments and controls, the proper fit and adjustment of each part, and the correct anchorage of each bolt, nut, and coupling. New parts, however, do not always operate freely or retain their original adjustment. Because of these facts and because of possible disarrangements which may be incurred in shipping, it is essential that each new car be thoroughly inspected and serviced before delivery.

There is no more opportune time for the dealer to secure a permanent customer than when the car is initially serviced. In the preparation of the new car for delivery, the dealer's service department should, therefore, use this first opportunity to convince the customer of the ability and thoroughness of its mech-

anics. A new car purchaser may be unaware of the painstaking detail required in the preparation of a new car, but he readily notices any improper operation which is the inevitable result of careless or casual servicing. Annoying conditions, necessitating frequent returns to the service station during the early period of ownership, dampen the customer's enthusiasm and invariably deprive the dealer organization of continued patronage.

Form No. H350, "Preparation of New Vehicle for Retail Delivery," is placed in the package compartment of each car before it leaves the factory and should be used by every dealer's service organization as a guide for preparing new cars for delivery. The form, which is the same for all models, includes complete instructions on the procedure for its use.

new car for retail delivery. When work is gwheel. File the remaining section according and transfer it to the purchaser's file in Service and transfer it to the purchaser's file in Service and transfer it to the purchaser's file in Service and the service and parking service and the service and parking service and the service and th
